

PROJECT OVERVIEW DOCUMENT - VAI RECON

AI-Powered Assistant for Financial Reconciliation

1. INTRODUCTION

VAI RECON is a Voice AI Assistant designed to automate financial reconciliation tasks for finance teams.

- ❖ Manual processes like searching bank statements, writing follow-up emails, and tracking tasks are time-consuming and prone to errors.
- ❖ VAI RECON solves this by allowing users to talk to an AI. The assistant listens, research, drafts emails, and plans tasks — all in South African English.

2. PROBLEM STATEMENT

Finance teams spend hours every month on:

1. Finding payments with missing references
2. Writing emails to clients and waiting days for replies
3. Manually searching for duplicates and discrepancies
4. Forgetting reconciliation deadlines and tasks

3. SOLUTION: VAI RECON

VAI RECON is a browser-based AI assistant that uses voice to make reconciliation 90% faster.

4. KEY FEATURES

1. Chatbot Interaction + Voice

Users speak to VAI using natural language. VAI understands and responds in an-ZA voice.

Example: "Find payment from Vuma on 16 July 2026 with no reference"

2. Email Generation

When VAI cannot find info, it automatically drafts a professional email. Users can send to client + CC multiple people. VAI tracks reply and notify the user.

3. Research Assistance

VAI searches and analyses data instantly.

Examples: "Find at least 3 duplicate payments in July" / "Show all payments over R50,000"

4. Task Planner

VAI acts as a personal assistant. Users can create tasks with voice.

Example: "Remind me to reconcile July bank statement at 9AM tomorrow"

VAI saves the task and sends a reminder.

5. User Recognition

VAI greets each user by name and title. "Good morning, Ms V"

All outgoing emails are signed with the correct user profile.

5. HOW IT MEETS PROJECT REQUIREMENTS

Project Requirement How VAI RECON Delivers

AI-powered assistant Uses Web Speech API + AI logic to understand commands

Email Generation Auto-drafts and sends emails with CC tracking

Task Planning Voice commands to create and manage tasks

Research Assistance Natural language search for payments and duplicates

Chatbot Interaction Full conversation with voice in and voice out

Practical Solution Built for real finance reconciliation work

6. TECHNOLOGY USED

- Frontend: HTML5, CSS3, JavaScript, CHATGBT, Lovable ai
- Voice: Web Speech API - Speech Recognition + Speech Synthesis
- Language: English South Africa
- Platform: Runs in browser. No installation needed.

7. EXPECTED IMPACT

- Time Saved: Reduce reconciliation time from 2 hours to 5 minutes
- Accuracy: AI finds duplicates and errors humans miss
- Communication: Faster client follow-ups with auto emails
- Adoption: Anyone can use it. Just talk.

8. CONCLUSION

VAI RECON transforms financial reconciliation from manual work into a conversation.

By applying AI tools effectively and using strong prompt engineering, VAI RECON delivers a functional, practical solution that saves time and reduces errors.
